

Minerva

Teacher Setup Guide

Connect the Minerva AI study assistant to your Moodle course • about 10 minutes • 5 steps

Minerva is an AI study assistant that answers from your own course materials. Your students reach it from a link inside your Moodle course. This guide walks you through the per-course setup from start to finish.

Before you start: your administrator has registered Minerva as an external tool across Moodle. You still need to enable it for each of your courses (Step 2) before it shows up in the activity chooser. If you do not see the options shown here, contact lambda@dsv.su.se.

Step 1. Log in to Minerva

Go to minerva.dsv.su.se and sign in with your SU account. Courses imported nightly from Daisy appear on your dashboard. If a course is missing, create it with **New Course**.

Your Minerva dashboard, with the courses you teach.

Step 2. Enable Minerva in your course

Minerva is registered across Moodle, but it does not appear in a course until you switch it on. In your Moodle course, open the **More** menu and choose **LTI External tools**. Find **Minerva**, activate it, and turn on **Show in activity chooser**.

LTI External tools

LTI External tools are add-on apps you can integrate into your course, such as interactive content or assessments. Your students can access and use them without leaving your course.

Add tool

Name ↕	Description	Usage count	Show in activity chooser	Actions
Minerva	Minerva AI study assistant	1		

?

Course LTI External tools: activate Minerva and show it in the activity chooser.

Once enabled correctly, Minerva appears in the activity chooser with its logo. If you instead see a blank or generic icon, the tool was registered without its icon; contact lambda@dsv.su.se.

Step 3. Add the Minerva activity to a section

In your Moodle course, turn on **Edit mode**, select **Add an activity or resource** in the section where you want the assistant, and choose **Minerva**.

Pick Minerva from the activity chooser; it carries the Minerva logo.

Give it a name students will recognise (for example, “Minerva AI assistant”), then choose **Save and return to course**. The activity now appears in your course.

Week 1: Variables and types

This week we cover variables, integers, floats, strings and basic input/output. Read chapter 1 before the lab.

Course syllabus

Minerva AI assistant

Week 2: Control flow

Conditionals (if/elif/else) and loops (for, while). Lab 2 focuses on writing your first small programs.

?

The Minerva activity is now in your course.

Step 4. Connect your course materials

Open **Minerva settings** from the course's **More** menu, pick your matching Minerva course from the list, and choose **Link Minerva course**.

What linking this course to Minerva does

- Sending "Sync materials" uploads course files, page/book/label HTML, section summaries, and URLs from this course to Minerva, where they are indexed for retrieval.
- When students chat via the Minerva assistant, their messages and relevant course-material excerpts are sent to Cerebras for AI inference.
- The Minerva API key configured below grants write access to the linked Minerva course. Treat it as a secret and rotate it in Minerva if it leaks.

Minerva connection

Minerva URL <https://minerva.dsv.su.se>

Select Minerva course ⓘ

ⓘ Required

?

Minerva settings: choose your Minerva course and link it.

Then choose **Sync materials** to upload your files, pages, and section summaries so the assistant can answer from them. Re-run it whenever you change materials; it also runs automatically twice an hour.

Sync conversations in this course

?

Minerva confirms how many resources were uploaded.

Step 5. Open it once to connect the activity

Click the Minerva activity you added. The first time, pick which Minerva course it should open and choose **Link and open Minerva**. Minerva remembers this, so every later launch by you or your students opens the right course.

On first launch, connect the activity to your Minerva course.

That is it: here is what students see

Students click the same activity and get a chat assistant that answers from your course materials, right inside Moodle. The suggested questions are drawn from what you synced.

New chat

Good morning, Tess!

Ask anything about Introduction to Programming.

TRY ONE OF THESE

How do I choose between for and while loops for a given task?

Can I concatenate strings and integers directly in input/output?

What's the difference between elif and else in nested conditionals?

Before sending messages, please review how Minerva handles your data.

Review & agree

Ask about the course materials...

Send

Introduction to Programming

Messages and relevant course-material excerpts are sent to Cerebras for AI inference. Responses may be inaccurate; verify with course materials. See [how Minerva handles your data](#).

Minerva is licensed under [AGPL-3.0](#)

The student view: a course-grounded chat assistant.

The screenshot shows the Moodle LMS interface. At the top, the Moodle navigation bar includes links for Home, Dashboard, and My courses, along with user profile and language settings. A left-hand sidebar contains a course menu where 'Minerva AI assistant' is highlighted. The main content area displays the Minerva AI assistant interface. It features a header 'Minerva AI assistant' with tabs for 'External tool', 'Settings', and 'More'. Below this, the assistant greets the user 'Good morning, Tess!' and prompts them to ask about programming. It provides three suggested questions: 'How do I choose between for and while loops for a given task?', 'Can I concatenate strings and integers directly in input/output?', and 'What's the difference between elif and else in nested conditionals?'. A yellow banner contains a data handling disclaimer and a 'Review & agree' button. At the bottom, there is a text input field with the placeholder 'Ask about the course materials...' and a 'Send' button. A footer section includes links for 'Data handling', 'Acknowledgements', 'Accessibility', and 'lambda@dsv.su.se'.

The same assistant, embedded inside the Moodle activity.

Good to know

- The assistant only uses materials you sync. Student conversations are visible to course staff; see **Data handling** in Minerva for details.
- Re-sync after you change materials. You can also include teacher-answered forum threads from **Minerva settings** (optional; student names are removed before upload).
- Questions or need higher usage limits? Email lambda@dsv.su.se.
